On Oct 1, 2000 this sequence version replaced gi:9931221.

During sequence assembly data is compared from overlapping clones.

Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Berkeley, CA 94720

Berkeley, CA 94720

For further information about this sequence, including its location for further information about this sequence, including its location for further sequence, please visit our sequence contains a contain the sequence of the sequenc
annotated human repeat sequence elements (e.g. Alu). Where the sequence is ambiguous, there is an annotation using the 'unsure'
                                                                         This sequence has been finished according to sequence map criteria as follows. An attempt is made to resolve all sequencing problems, such as compressions and repeats, but not necessarily within known
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human DNA sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Laboratory, MS 64-121, On Nov 19, 1998 this s

Em: RMBL; Sw:, SWISSPROT; Tr:, TRRBL; Wp:, WORMPEP; Information on the WORMPEP database can be found at http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 6, constructed by the Sanger Centre Chromosome 6 Mapping Group. Further information can be found at http://www.sanger.ac.uk/HGP/Chr6

RP3-472A9 is from the library RPCI-3 constructed at the Roswell Park Cancer Institute by the group of Pieter de Jong. For further details see http://bacpac.med.buffalo.edu/
VECTOR: pCYPAC2

IMPORTANT: This sequence is not the entire insert of clone RP3-472A9 it may be shorter because we sequence overlapping sections only once, except for a 100 base overlap.

The true right end of clone RP3-472A9 is at 85195 in this sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                       24927 a

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                             The present invention relates to a recombinant DNA construct of a plant (Arabidopsis thaliana) centromere. The constructs are useful for producing stably inherited michrosomes which can serve as vectors for the construction of transgenic plant and animal cells expressing selected proteins such as hormones, enzymes, interleukins, clotting factors, cytokines, antibodies, and growth factors.
                                                                                                                                                                                                                                                                                                                                                                                                     Recombinant DNA construct comprising a plant centromere, useful for producing stably inherited michrosomes which can serve as vectors \mathbf{f}_i the construction of transgenic plant and animal cells -

                                                                                                                                                                                                                     406588
                                                                                                                                                                                                                                                                                                                                                                                                            AAX20248 to AAX20402 represent polynucleotide sequences isolated from Borrelia burgdorferi (Bb). Products derived from Bb can be used for the detection, diagnosis, characterisation, prevention and therapy of Bb infections, e.g. Lyme disease. They can also be used for the productton of biosynthetic products, e.g. enzymes. Borrelia belongs to a family of motile, spiral shaped bacteria called Spirochetes. Spirochetes are pathogenic in humans and Borrelia causes epidemic and endemic relapsing fever, and Lyme borreliosis, more commonly known as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New isolated Borrelia burgdorferi nucleic acids - used to develop products for the detection, diagnosis, characterisation, prevention and therapy of infections, particularly Lyme disease

                                                                                                                                                                                                                                                                                                                                                                                                                                                                      AAZ46138-Z46168 encode human phosphorylation effectors (PHSP), designated PHSP1-PHSP31 (the protein sequence for PHSP28 is not given in the specification). The sequences were isolated from cDNA libraries prepared from various human tissues. The PHSP proteins are useful for the diagnosis, treatment and prevention of proliferative disorders, lumnune disorders and neuronal disorders. The PHSP proteins form pharmaceutical compositions which useful for treating or preventing disorders associated with decreased PHSP expression/activity. PHSP antagonists are useful for treating or preventing disorders associated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New human phosphorylation effectors useful for the diagnosis, treatment and prevention of proliferative, immune and neuronal disorders \, -

                                                                                                                                                         Š
                                                                                                                                                                                   Вb
                                                                                                                                                                                                          Ş
                                                                                                                                                                                                                                                                                                       The present invention describes primer sets for synthesising 5602 CC full-length cDNAs defined in the specification. Where a primer set CC comprises: (a) an oligo-dT primer and an oligonucleotide complementary cto the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the coligonucleotide comprises at least 15 nucleotides; or (b) a combination cof an oligonucleotide which comprises a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end complementary to the complementary strand of a polynucleotide which comprises a 5'-end complementary to a polynucleotide which comprises a 3'-end sequence, where the combination of the 5'-end sequence/3'-end sequence is selected from those defined in companies at least 15 nucleotides and the combination of the 5'-end sequence/3'-end sequence is selected from those defined in companies at least 15 nucleotides and the combination of the fragy and sequence is selected from those defined in companies are useful for synthesising polynucleotides, companies are useful for synthesising polynucleotides, companies and companies are useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers are useful for the companies of the abnormality of the full-length cDNAs easily without any specialised methods. AAH03166 to AAH13628 and AAH13633 to AAH13674 represent human cDNA sequences; and AAH3628 to AAH13632 represent oligonucleotides, all of which are used in the exemplification.
                                                                                                                                                                                                                                                  Query Match

                                                                                                                                                                                                                                                                                                밁
                                                                                                                                                                                                                                                                                                                                       CC The present sequence is the complete nucleotide sequence of the CayI C locus, including the true 5'-terminus of CayI. The sequence was CC constructed using overlapping clones (one of which also overlaps with CC the CayA region). The CayI region contains clusters of putative open CC reading frames (ORFs) with different polarities. The putative ORFs for CC this region are shown above. It is hypothesised that some of these ORFs CC may encode exporter molecules with homology to the ptl genes of CC Bordetella pertussis and VIR B4 genes of Agrobacterium tumefaciens and CC for proteins with motifs shared by the purported invasion factors of CC Salmonella genus. The absence of the CayA gene in the type I strains is Cassociated with the absence of CayI sequences (which may encode virulence CC factors restricted to type I strains). The CayA gene in the type I strains is Cassociated with the absence of CayI sequences (which may encode virulence CC factors restricted to type I strains). The CayA gene in the diagnosis of H. pylori CC (claimed) for the treatment of H. pylori infection associated with e.g. CC (claimed) for the treatment of H. pylori infection associated with e.g. two

The peptides are used as food preservatives and medical antibacterial agents. This sequence encodes the A. dichotoma kabutosin A protein described in the method of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                CC sequence and an oligonucleotide comprising a sequence complementary to a CC polynucleotide which comprises a 3'-end sequence, where the CC oligonucleotide comprises at 1'-end sequence, where the CC chief of the 5'-end sequence/3'-end sequence is selected from those defined in CC the specification. The primer sets can be used in antisense therapy and CC in gene therapy. The primers are useful for synthesising polynucleotides, CC particularly full-length cDNAs. The primers are also useful for the CC detection and/or diagnosis of the abnormality of the proteins encoded by CC the full-length cDNAs. The primers allow obtaining of the full-length CC CNAs easily without any specialised methods. AAH03166 to AAH13628 and CC AAH3633 to AAH18742 represent human cDNA sequences; AAB92446 to CC CAAB95893 represent human amino acid sequences; and AAH13629 to AAH13632 represent oligonucleotides, all of which are used in the exemplification CC of the present invention.
                                                                                                                                                                                                                                                                                                    Ъ
                                                                                                                                                                                                                                                                                                                                 Ω

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               CC gene from the non-typeable Haemophilus influenzae (NVHi) strain k9.

CC Hia genes and proteins have antiinflammatory, auditory and antibacterial cc activities, and can be used in the production of a vaccine. An CC immunogenic composition comprising an Hia gene, a polypeptide encoded by an Hia gene, or a recombinant Hia polypeptide is useful for inducing CC protection against disease caused by Haemophilus strains in a CC susceptible host, preferably a human. An Hia protein is useful as an CC antigen, in immunogenic preparations including vaccines, as a carrier CC for other immunogens, and in the generation of diagnostic reagents. Hia CC is useful for treating diseases caused by the infection of Haemophilus CC influenzae such as meningitis, epiglottitis, septicaemia and otitis CC media. Recombinant production of Hia favours high recovery of the protein compared to the low recovery of native protein from Haemophilus CC influenzae species. A truncated protein has a significantly higher CC amount of recovery than a full-length protein.

                                                                                                                                              Alzheimer's; Parkinson's disease; Huntington's disease; haemostatic; amyotrophic lateral sclerosis; Shy-Drager Syndrome; chemotactic; chemokinetic; thrombolytic; drug screening, artheitic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to olfactory receptors (AAG98432-AAG98609) and the genes encoding them (AAH83879-AAH84131) including pseudogenes of 10 primate species, mouse and human. The nucleic acids and receptors may be used in the food processing industry (e.g. for the detection of aromas, quality control and sample analysis), in perfumery (e.g. for the analysis or comparison of perfumes) and in the environment (e.g. for the detection of toxic substances and/or trapping of odours).

                                                                                                                                                                                                                                                                                                           3183
                                                                                                                                                                                                                                                                                                                                                           3123
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system disease, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 δÃ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This DNA sequence comprises Mycobacterium bovis BCG deletion Sequence BCGdelta3. A specific genetic deletion of this region C results in an avirulence phenotype of the mycobacterium. 2 Other C deletion regions (see AAT3535 and AAT33536) have also been detected. C Identification involved screening a BCG cosmid library with a CC radiolabeled probe obtained following DNA subtraction between CC virulent Mycobacterium tuberculosis H37Rv and avirulent BCG.

CC The deletions provide useful markers for the identification of an CC avirulent, or a virulent, mycobacterial phenotype. Determination CC avirulence requires the detection of the presence or absence of CC the deletion; the deletions are detected either by detecting the presence or absence of deletion junctions (see AAT33538-46), or by CC detecting the presence or absence or absence of the sequences contained within CC the deletion. Deletion polypeptides are used as components of CC immunological assays and in vaccines.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Matches

receptors that are involved in detecting such secondary scents. This enables the construction of a scent representation (also called a scent fingerprint or scent profile), which may be used to re-create
                                                                                                                                                                                                                                                                                              scents and the identification of the odour receptors used to detect these primary scents. The methods also enable determination of secondary scents and the identification of combinations of odour
                                                                                             and edit scents. Libraries of olfactory receptors are useful for determining the interaction pattern of a composition with the receptors, and can be used for determining differences in the olfactory faculties
                                                                                                                                                                                                                                                                                                                                                                                              The present sequence is one of a number of isolated polynucleotides which encode polypeptides involved in olfactory sensation. The polynucleotides can be used in screening for olfactory agonists and antagonists. The methods allow for the determination of primary

FKBP46 is a novel insect cell nuclear immunophilin, which can be used to study and identify additional immunosuppressive drugs that bind to it. Such immunosuppressive agents

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  RESULT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This invention describes the isolation of a novel human aminopeptidase PC (Amp). This protein is used to produce recombinant Amp and can be used for gene therapy for treating Amp-deficiency conditions. Its fragments are used as primers and probes to identify patients with homozygous and heterozygous Amp deficiency, including prenatal diagnosis (patients defective in Amp are at risk of developing angloedema if treated with angiotensin-converting enzyme inhibitors), also as antisense inhibitors in cases of excessive Amp expression. The product of the invention is also used to identify Amp-expressing sequences in other animals and to generate transgenic animals, and comparisons of genomic sequences are used to detect mutations. Amp inhibitors are potentially useful as antihypertensive agents and to prevent or treat arterial (re)stenosis or atherosclerosis. The structure of Amp is used to design synthetic substrates, e.g. for use in Amp assays. Amp, which hydrolyzes N-terminal imido bonds, can be used to degrade industrial protein feeds to free amino acids, to degrade protein synthems and for studying its
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match

The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs easily without any specialised methods. AAH03166 to AAH13628 and AAH13633 to AAH18742 represent human cDNA sequences; AAB92446 to AAB95893 represent human amino acid sequences; and AAH13629 to AAH13632 represent oligonucleotides, all of which are used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dT primer and an oligonucleotide comprises one of the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence comprises a 5'-end complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprising a sequence complementary to a polynucleotide which comprises a 3'-end sequence, where the oligonucleotide which comprises a 3'-end sequence, where the oligonucleotide which comprises a 1-east 15 nucleotides and the combination of the 5'-end sequence/3'-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and the comprises as a sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and the comprise of the sequence is selected from those defined in the specification.
                                                                                                                                   25-FEB-2000;
                                                                                                                                                                          06-SEP-2000
                                                                                                                                                                                                                    EP1033405-A2
                                                                                                                                                                                                                                                            Arabidopsis thaliana.
                                                                                                                                                                                                                                                                                                                                                                                                                                  17-OCT-2000
                                                                                                                                                                                                                                                                                                                                                                                                                                                                            AAC39501;

proteins AAB49649 - AAB49658. Sequences AAF23420 - AAF23450 represent
primers and probes used in the isolation and characterisation of the SECX
DNA sequences of the invention. The new polypeptides and nucleic acids
can be used in screening assays, detection assays, preventive or
predictive medicine, therapeutic and prophylactic treatment, and
pharmacogenomics. Specifically, the SECX polypeptides and nucleic acids
care useful for treating cancer; other disorders related to angiogenesis
ce.g. abnormal wound healing, psoriasis; neurodegenerative diseases;
immune disorders; liver cirrhosis; benign tumours; fibrocystic conditions
and tissue hypertrophy (e.g. benign prostatic hypertrophy); allergic
reactions and conditions such as asthma and other respiratory problems;
crastalesses associated diseases or disorders. The
coplypeptides can also be used for bone, cartilage, tendon, ligament
and/or tissue growth or regeneration, wound healing, tissue repair and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Matches

                                                                                                                                                          the specification. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs easily without any specialised methods. AAH03166 to AAH13628 and AAH13633 to AAH18742 represent human cDNA sequences; AAB92446 to AAB95893 represent human amino acid sequences; and AAH13629 to AAH13632 represent oligonucleotides, all of which are used in the exemplification
                                                                                                                                                                                                                                                                                                                           to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprising a sequence complementary to a polynucleotide which comprises a 3'-end sequence complementary to a polynucleotide comprises a 3'-end sequence, where the oligonucleotide comprises at least 15 nucleotides and the combination of the 5'-end sequence/3'-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present full-length
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Primer sets for synthesizing polynucleotides, particularly the 5602 \, \mathrm{full}-length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  02-MAY-2000; 2000JP-0183767

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Matches
                                                                                                                                                                             A fish-originated trans:glutaminase amounts at low economic cost.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The DNA encodes a protein, isolated from Paralichthys olivaceus, which has transglutaminase (TG) activity. The TG's of the invention can be isolated from Pagrus major, Theragra chalcogramma, Paralichthys olivaceus or Oncorhynchus keta. Fish-originated TG's are economical to produce in large quantities.

For example, they may be used in gene therapy or in vaccines. Typical of diseases which are potentially treatable are cancers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Nucleic acids encoding 47 human secreted preventing, diagnosing and/or treating edisease and diabetic retinopathy -
